

Project: **Patient Transport (and other SIMilar forms)**
 Materials: Paper (option: use a hot laminate to cover)
 Cost: .05-.10¢ - Paper option. \$1.00 - \$2.00 (laminated option)
 Time: One hour

Details: *For use with the embedded model (live patient) simulation.*

For some scenarios, the patient may need to be transported (e.g. to surgery, or imaging) – Image ‘A.’ This allows the ‘nurse’ to give a brief pass down to the ‘charge nurse,’ document, and prepare the patient for the procedure (assist to wheelchair or obtain portable O2 and IV pump). For continuity of care, the ‘nurse’ completes a transport form (Image ‘B’) before the patient leaves the unit (I use a hot laminator so that the ‘nurse’ can use a dry erase marker to complete the form).

This attention to detail helps the nurse bundle care, prioritize, and follow through.
