

Project: Patient Education / Disease Brochures

Materials: Just paper and access to a printer.

Cost: .05-.10¢ (black & white), .25¢ (color)

Time: Two – three hours (student’s time, not yours).

Details: Work with other faculty (preferably the instructor of record for the theory course that coincides with the simulation scenario/topic exemplar of your simlab). As an assignment, have a group of students research a topic and create a brochure (Image ‘A’). After it is graded, obtain a copy, print it, and use it during sim scenarios as part of the patient teaching portion of the scenario. There are also many reputable sites that have excellent brochures ready for the download.
